

**KDCH** universal microprocessor based programmable PID controller.

**Inputs:** 3+1 independent channels, 16 bit SETS type AD converter, 31 type of sensors, HBA (Heat-Break) alarm.

**Programmable** up to 1600 segments. Special BASIC-HAGA commands, 1 stack level subroutine.

**Outputs:** 8 relays, or OPC for STR, 2 analogue with 10 bit resolution

**Communication:** MODBUS for PC Parallel interface for registering on printer
